Application of IBX BOOST

IBX BOOST APPLICATION WITH ONE STEP GEL POLISH SYSTEMS

- 1** CLEANSE nails with Cinnatize using a lint free wipe.
- 2** Apply a **THIN** layer of IBX BOOST BASE over the nail, capping the free edge.
- 3** Cure in a UV or LED lamp for one minute. Do not cleanse.
- 4** Apply a **THIN** coat of IBX BOOST to the nail plate allowing it to self-level. Then glide the product over the entire nail, capping the free edge.
- 5** Cure in a UV or LED lamp for one minute.
- 6** For severely damaged nails or to build additional thickness, we recommend a **THIN** second coat of IBX BOOST. Apply the second coat of IBX BOOST as in #4 and cure as in #5.
- 7** Remove the sticky layer with 90% or higher IPA and then buff the surface with a 220 grit file.
- 8** Apply the Gel Polish Color Coat as you normally would.
