

## BOOST GEL APPLICATION

- Shape the free edge.
  - Gently push back cuticles making sure there is no cuticle left on the nail plate.
  - Cleanse nails with Cinnatize scrubbing the nail plate.
- Avoiding contact with the skin, apply an **extremely thin** coat of **BOOST** Base using a scrubbing motion and light pressure to work the product into the nail plate and cap the free edge.
- Cure in a UV or LED lamp for one minute. Do not cleanse.
- Apply a **THIN** coat of **BOOST** Gel to the nail plate and glide the product over the entire nail (just like nail polish), capping the free edge. Allow the product to self level.
- Cure in a UV or LED lamp for one minute.
- We recommend a second **THIN** coat of **BOOST** Gel applied the same as the first. Do not cleanse before this coat.

- For a natural look finish your service finishing the service with **BOOST HIGH SHINE TOP COAT** and cure for 1 minute to protect your Boost application. Cleanse with 90% IPA. **BOOST** can also be applied under gel polish, soak-off and hard gels.

### If no smoothing required:

Finishing the service with **BOOST HIGH SHINE TOP COAT** and cure for 1 minute, then cleanse with 90%+ IPA.

### If smoothing required:

Finishing the service with **BOOST HIGH SHINE TOP COAT** and cure for 1 minute, then cleanse with 90%+ IPA.
